

Phonak Naída Q

Product information

Phonak Naída Q is the most complete, WaterResistant power portfolio covering moderate to profound hearing losses. It includes three models, available in four performance levels. Naída Q introduces significant performance enhancements across all levels, offering a host of features, based on Binaural VoiceStream Technology. The Naída Q portfolio is available in the highly attractive Phonak Quest color range.

With SuperPower plus (xSP plus) xReceiver

Moderate to profound hearing loss, all audiometric configurations.

With Power (xP) xReceiver

Mild to severe hearing loss, all audiometric configurations.

With Standard (xS) xReceiver

Mild to moderately severe hearing loss, all audiometric configurations.

With hook / mini hook

Moderate to profound hearing loss, all audiometric configurations.

With Power SlimTube

Moderate to profound hearing loss, all audiometric configurations.

With hook / mini hook

Severe to profound hearing loss, all audiometric configurations.

With Power SlimTube

Severe to profound hearing loss, all audiometric configurations.

***Note:**

- “5” stands for “Dust protected” (Ingress of dust is not entirely prevented, but it must not enter in sufficient quantity to interfere with the satisfactory operation of the equipment or complete protection against contact).
- “6” stands for “Dust tight” (No ingress of dust; complete protection against contact).
- “7” translates to “Immersion up to 1 m” (Ingress of water in harmful quantity shall not be possible when the enclosure is immersed in water under defined conditions of pressure and time [up to 1 m of submersion within 30 minutes]).

Fitting

Software	Phonak Target™ 3.1 or higher
Interfaces	iCube, NOAHLink, HI-PRO, HI-PRO 2

Acoustic coupling

Sound outlet	Hook	Available as damped (HE7 680), undamped (HE7) and as pediatric hook (mini hook HE7 680)	
	Power SlimTube	Available in left, right and five different lengths (00, 0, 1, 2, 3)	
	xReceiver	Available in left, right and four different lengths (0, 1, 2, 3)	
Earpiece	Dome	Open dome	available in three sizes (S, M, L)
		Closed dome	available in three sizes (S, M, L)
		Power dome	available in three sizes (S, M, L)
	SlimTip	Custom made earpiece available in hard and soft material	

Wireless communication compatibility

Key features

Speech in Wind

Speech in Wind is a binaural feature that significantly increases speech understanding and listening comfort in situations where wind noise affects one ear more than the other. In an asymmetric situation, the signal from the better side is streamed to the affected side using the unique Phonak Binaural VoiceStream Technology™. By leaving frequencies above 1500 Hz untouched, Speech in Wind ensures the intelligibility of speech and comfort, while maintaining spatial cues needed for localization. Speech in Wind is available as manual program.

auto StereoZoom

StereoZoom increases speech understanding in loud environments by up to 6 dB SNR. It is the industry's only binaural four-microphone directional microphone system which is now automatically activated within SoundFlow. Once a situation is classified as "speech in loud noise", StereoZoom is automatically activated and the width of the beamformer is narrowed. This reduces environmental noise and focuses on a single voice in the crowd.

DuoPhone

DuoPhone improves the signal-to-noise ratio and therefore increases understanding of a telephone conversation. As soon as a telephone conversation starts, the telephone signal is not only amplified, it is also streamed using Binaural VoiceStream Technology to the other hearing aid, so that the caller's voice is heard in both ears.

Life is on

We are sensitive to the needs of everyone who depends on our knowledge, ideas and care. And by creatively challenging the limits of technology, we develop innovations that help people hear, understand and experience more of life's rich soundscapes.

Interact freely. Communicate with confidence.

Live without limit. Life is on.
